

Planet Friendly

**WETTER WATER, GREENER GRASS
NO CHEMICALS!**

EPA Est# 68770-CA-001

Ionization & Oxygen

Ecosmarte has configured two proven water treatment technologies: Ionization and oxygenation to eliminate the use of chemicals in golf irrigation applications. Surface tension of the water is reduced, an ionic copper residual is placed in the water effectively making the water wetter and confirming a proven fungicide and bacterial control agent in all water used at normal operating expense. Ionic copper has long been used to control algae, fungus, bacteria, and scale in water treatment and has its technology roots in the Apollo Space program. Ecosmarte's chamber exchange program and operating cost guarantee make this the most environmentally friendly cost effective solution available to course superintendents. Testimonials, references, and in select markets money back guarantees are available.

Manufacturer of the Best Non-Salt, Non-Chemical Water Treatment & Irrigation Technology

*Established in 1993

*Commercial Applications including: General Motors, Pillsbury, Marriott, LaQuinta Inns, Wirsbo, etc.

*Products installed on 5 Continents, 43 Countries, and all 50 U.S States.

*Factory showrooms in Minneapolis, Los Angeles, Dallas, Detroit, Redding, California, and Madrid, Spain.

The World is coming to us...

NO TOXIC CHEMICALS

Quality Guarantee

Ecosmarte guarantees it will furnish any and all electronics and chambers to irrigation site until field results deliver wetter water. Ecosmarte will train designated personnel on the simple operation and maintenance of the system.

Operation Cost Guarantee

Ecosmarte guarantees annual purchases of copper bars not to exceed \$2000 per 18 holes per year and to install all copper through the chamber exchange program.

Golf Turbo Technical Specifications

Electrical: 110V Programmable Class C. CE Approved.
28VDC Four Output UL Listed PVC Power Supply

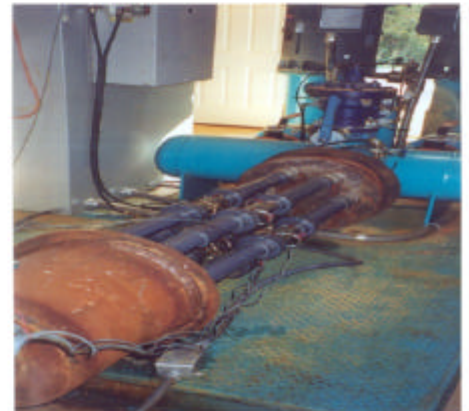

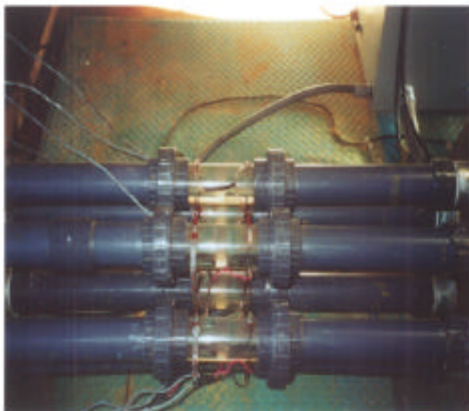

Plumbing: Sch 80 Viton Unions. 150 PSI,
1600 GPM Maximum, 100 GPM Minimum

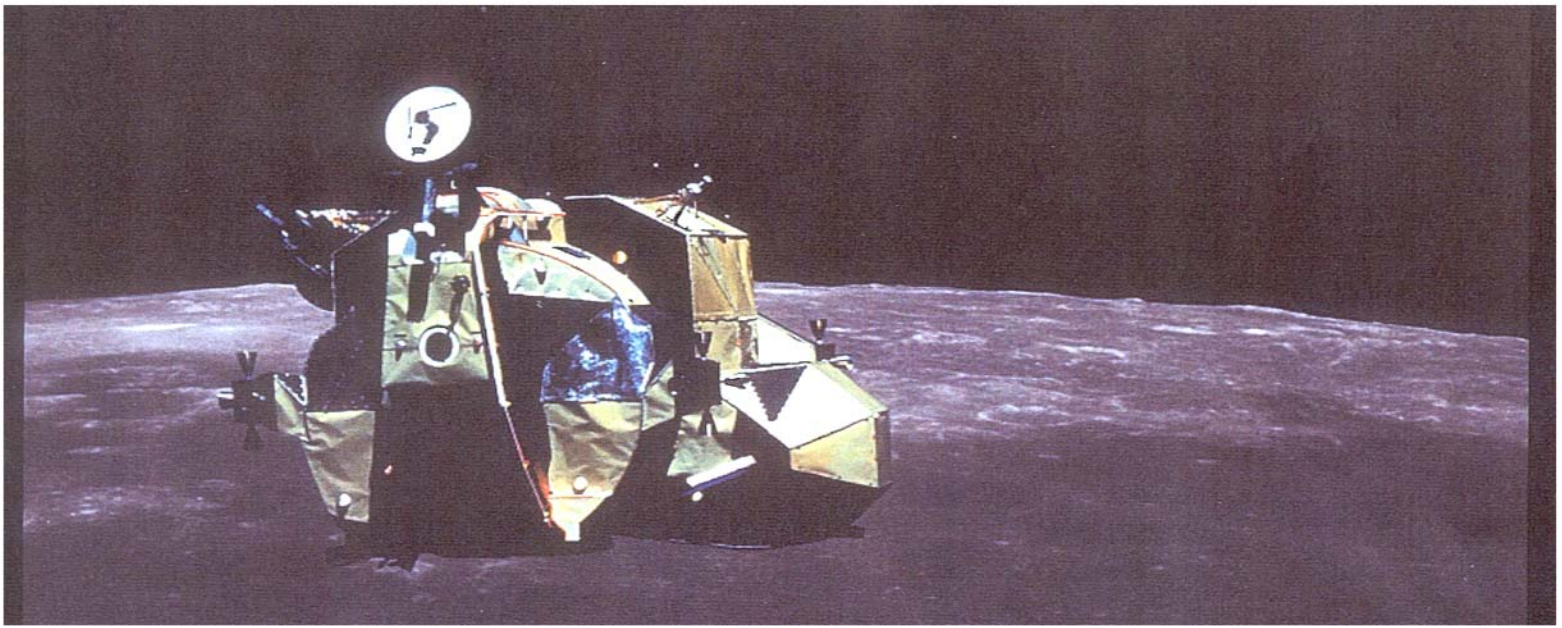

Metallurgy: Copper: 110CU or better self-sacrificing anodes
Titanium/Platinum: Proprietary composite material.

Warranty: 3-years on all electronic and plumbing components.
Extended warranties available. Copper electrodes incorporated
in operating cost guarantee during warranty period.

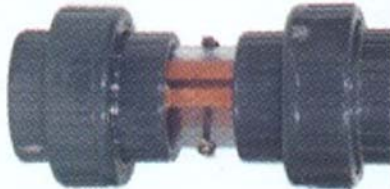

"The Ecosmarte system has given us our greenest grass ever, while virtually eliminating all sulphur fungicide, nematicide and surfactant use. In fact this year we even avoided the usual three time pinching of our 18 greens. We have paid for it in one year and we strongly recommend it."

Superintendent
Stan Mickle
Owner
Canyon West Golf

Ecosmarte is the leading developer of environmentally friendly water treatment technology, building on successes that began in the 1960's with the Apollo Lunar program. Ecosmarte has enhanced this core technology with natural oxygen from within the water. When America went to the moon on three week missions in 1968 no chemicals were used--and we did not know which microbes would need to be killed.
